Profile

Flutter Mobile Developer with production experience building **scalable, real-time cross-platform applications** using **Clean Architecture**, **Flutter BLoC/Riverpod**, and **WebSocket-based live systems**. Skilled in **offline-first data solutions**, **Firebase/Firestore** and **Supabase** integration, and **CI/CD pipelines with GitHub Actions**. Brings additional experience integrating **ML models into mobile products**, including CNN-based detection and predictive pipelines.

Technical Skills

Languages: Dart, Python, Java, C
Mobile App Development: Flutter, Cross-platform Development, Responsive UI Design
State Management: Flutter Bloc
Backend & APIs: RESTful API Integration, JSON Parsing, FastAPI
Databases: Firebase, Firestore, Supabase, SQLite (Floor), MySQL
Architecture & Practices: Clean Architecture, Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), SOLID Principles, Agile Methodology
Tools & Platforms: Git, GitHub, Android Studio, VS Code
Other: Dependency Injection (GetIt, Injectable), GoRouter (Navigation), Performance Optimization

Experience

Flutter Developer January 2026 – Present
Join Venture AI

- Engineered core UI for **Mili**, a **Grab/Gojek-style marketplace** with multi-stage **Google Maps**-integrated booking flows across **9 service verticals**.
- Built **real-time** features – live bidding, driver tracking, and in-app chat – via a **WebSocket** service layer and **Dio/Retrofit** typed networking.
- Applied **Clean Architecture** with **Riverpod** (code-gen providers) and **Freezed** for scalable, type-safe state management.
- Designed and built **Coach Hub**, a two-sided coaching marketplace with a full **booking lifecycle engine** (request → accept → schedule → review) and role-based navigation.
- Implemented **DI (GetIt/Injectable)** and **GoRouter** across production and personal-project codebases.

Electrician Apprentice Hours November 2025 – December 2025
Client Project *App Store*

- Shipped **Electrician Apprentice Hours** solo to the **App Store** – **Clean Architecture**, **BLoC/Freezed**, dual **Firebase + SQLite** backend with atomic sync across 18 features.
- Built **6 NEC-compliant electrical calculators** and a **voice-to-form** pipeline (speech-to-text → **HMAC-signed** API).

Flutter App Developer June 2024 – November 2025
eBooster: English Learning App (Coseries) *Play Store*

- Built **gamification and quiz modules** with **Flutter Bloc**, boosting user engagement and retention.
- Implemented offline vocabulary tracking with **SQLite (Floor)**, including seamless **database migrations**.
- Applied **Clean Architecture** (data/domain/presentation) with **GetIt DI** and **GoRouter** for a maintainable, deep-link-ready codebase.
- Resolved **UI thread bottlenecks** and optimized **SharedPreferences**, improving stability on low-end devices; redesigned grammar UI/UX with step-by-step progress indicators.

Featured Projects

Mili – Multi-Service On-Demand Marketplace
Uber/Grab/Gojek-style Customer & Driver Platform

- Built **Mili**, an **Uber/Grab/Gojek-style marketplace** with **Customer & Driver** apps sharing a single Flutter codebase across **9 on-demand service verticals**.
- Engineered **real-time bidding** over **WebSockets** — live job discovery, bid updates, chat, and notifications with **auto-reconnect**.
- Implemented **live GPS tracking** with **Google Maps** polyline routes and secure auth (**OTP, Google Sign-In, FCM**) for production deployment.

Blood Setu – Blood Donation Networking App
Real-time Donor & Request Matching Platform for Bangladesh *GitHub*

- Built **Blood Setu**, a Flutter blood donation platform with **real-time chat, geolocation-based donor matching, and OSM/GPS integration**, using **Clean Architecture, Bloc, GoRouter, GetIt/Injectable, and Firebase**.
- Engineered **geohash-based donor discovery** with radius expansion and **Firestore cursor pagination**, tested against **1,477+ records** for scale.
- Automated **CI/CD (GitHub Actions)** for linting, testing, and release APK builds on every push.
- Implemented **real-time messaging** (Firestore + Realtime Database) with presence, typing indicators, and unread tracking.

AI-Powered Smart Farming Assistant (Group Project)
Smart Agriculture & Decision Support System *GitHub*

- Built cross-platform Flutter app with CNN-based crop disease detection and more than 5 **ML models** for yield prediction, fertilizer recommendation, and price forecasting; structured with **Clean Architecture** and **Flutter Bloc**.
- Integrated **Supabase** (**OAuth and JWT** + real-time DB), **Dio** for API calls, **Geolocator** for location, and **(GetIt,Injectable)** for DI; added weather API and **AI chatbot** for farmer assistance.

Education

Green University of Bangladesh Sept 2022 – Sept 2026
B.Sc. in Computer Science and Engineering *CGPA: 3.74/4.00*

Adhyapak Abdul Majid College June 2019 – Dec 2021
Higher Secondary Certificate *GPA: 4.58/5.00*

Achievements

Vice Chancellor's Merit Award – Spring 2024 & Fall 2025 *Green University of Bangladesh*

Recognized for outstanding academic performance; placed on the VC List of Meritorious Students in the B.Sc. CSE program for Spring 2024 and Fall 2025 semesters.

HackTheAI 2025 – Inter-University Hackathon *Green University of Bangladesh*
Powered by SmythOS — Organized by Department of CSE, GUB

Ranked **14th out of 242 teams**; selected in Top 50 for onsite final round. Built an AI-driven solution under SmythOS mentorship.

Certifications & Activities

Dart & Flutter: Complete Developer's Guide (Udemy) July – Nov 2023
Dart & Flutter: Zero to Mastery + Clean Architecture (Zero to Mastery) Sept – Nov 2023

Technical writer sharing Flutter development tutorials and best practices on personal blog at kawser.me.
